

DATASHEET

Magnetic and Suction Antenna Mount For Mobile Antennas Model: **Super Sucker**

PART NO: **027423**

This universal Magnetic suction base provides the benefit of simple short-term installation of an antenna to any ferrous based metal panel. Ideally a vehicle panel will provide a suitable base for antenna mounting when a temporary installation is required. The base uses a combination of both air suction and magnetic force to secure the antenna to the vehicle. The only way to remove the base is to lift the lip of the suction cup to allow air to fill the vacuum created.

Soft PVC material is used in the suction base ensuring the vehicle paintwork will not be affected by the use of this antenna mount. It is important to select a surface with solid structure to ensure the panel will not be affected in any way.

This mount is sufficiently strong to mount larger and heavier antennas due to the strength provided by the base.

INSTALLATION

Position the lip towards the rear of the vehicle

MOUNTING

Antenna mounting hole, Diameter = 16mm

FEATURES

- Extremely strong when correctly fitted
- Using a combination of air suction and magnetic force to hold base to vehicle
- Universal Mounting of GPI (Group Plane Independent) antennas
- Soft PVC suction cup will protect paint work
- Cable strain relief for 3, 5, 8mm coaxial cable
- Field assembly with screw-driver only
- Earth bar for improved coupling to vehicle
- Note: Top plate 4.2mm thick, clearance from mounting plane to base 24.2mm

WARRANTY

12 months (Please refer to Benelec Terms & Conditions)

REMOVAL

Lift lip to remove from vehicle.
