

## Part N<sup>o</sup> 04114

### UHF Jack, flanged, Panel mount, with nut

The 04114 mount is essentially a flanged SO-239 (UHF female) connector designed to mount on many mobile radios and mate externally with antenna coax that have PL-259 UHF male plugs; and internally via a soldered centre and solder tab shield. The construction features Brass metal parts with Nickel or Gold plated surfaces as appropriate. It utilizes a bakelite dielectric. The shield screw thread connection conforms to the proper UHF PL-259 standard imperial thread (unlike some competitor 'metricized' parts).

#### Applications

Terminating Coaxial cable with radio equipment

#### Features

- ✓ Nickel Plated brass.
- ✓ Gold plated centre-pin
- ✓ Bakelite dielectric
- ✓ Reliable, Robust, Durable
- ✓ Solder tab centre connection
- ✓ Solder Tab shield connection (1.7mm hole)
- ✓ 18mm AF nut
- ✓ Useable up to 520MHz
- ✓ Flange 20mm across
- ✓ Requires 15.9mm panel hole

04114 side

04114 rear
