Applied to Life.™

3M™ Defence & Law Enforcement Portfolio

We strive to set the standard for confidence and trust by providing rugged, reliable protective communication equipment.

3M™ PELTOR™ Solutions for today's modern warfighter have been designed for use in combat and combat support operations, specifically for use with firearms and ballistic combat helmets. The hearing protectors feature external microphones for environmental listening (aka *Talk-Through*) capability, so operators can maintain auditory situational awareness while protecting their hearing.

With more than 60 years of experience, the PELTOR™ Brand promises quality communication solutions that help provide an excellent balance of comfort and protection.

The advanced engineering and technology inherent with the PELTOR™ Brand fits with the high standard of quality and innovation of a continuously evolving range of product solutions that you, our customers, come to expect from 3M.

3M | PELTOR™

A soldier's senses must be sharp at all times to enable successful operations. Hearing can be just as critical as vision, both in darkness and daylight.

Noise levels are often so high that they can cause immediate and permanent damage to one's hearing if proper protection is not worn.

He or she must be able to hear incoming radio signals without the risk of revealing the actual location. A snapping twig or a whispered message must be heard and located. Communication over the radio must be possible, even in deafening combat situations.

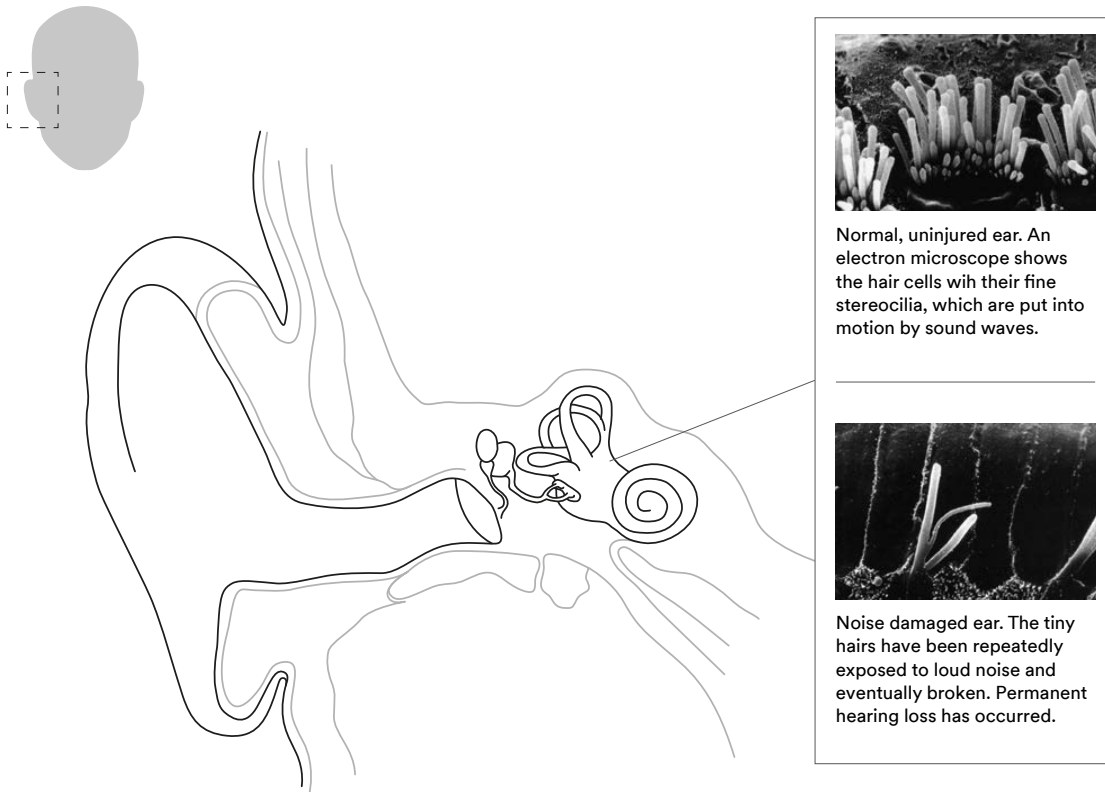

3M | PELTOR™

Communication and hearing protection

Easy To Damage – Easy To Protect

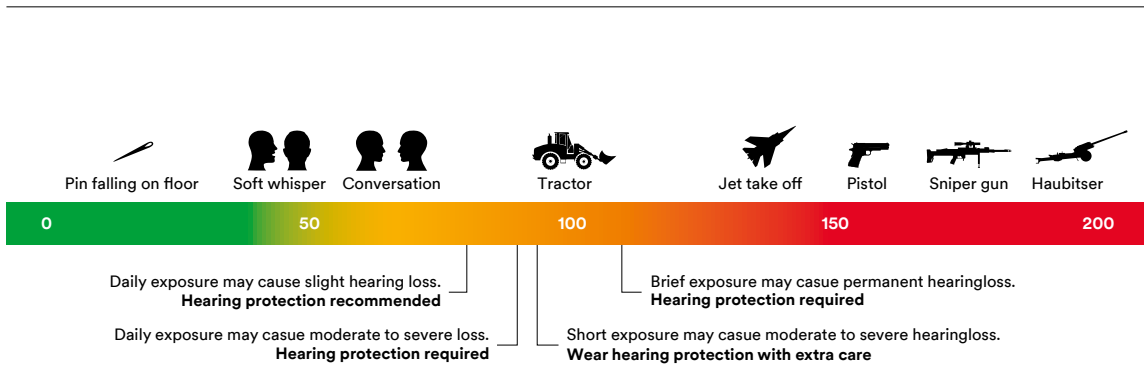

The human ear is designed to pick up natural sounds. All of our exciting machines and inventions have created a whole range of unnatural sounds that the ear isn't designed to handle. When the stereocilia are repeatedly exposed to excessive doses of noise, they break. The surviving stereocilia can only handle a fraction of the usual information transfer, and permanent hearing damage is the result.

Normal, uninjured ear. An electron microscope shows the hair cells with their fine stereocilia, which are put into motion by sound waves.

Noise damaged ear. The tiny hairs have been repeatedly exposed to loud noise and eventually broken. Permanent hearing loss has occurred.

Five minutes of carelessness

A damaged ear cannot be repaired. Noise in the environment is one of the most common causes of hearing impairment.

We can only tolerate a limited daily dosage of noise. How harmful the noise is depends on the exposure time in combination with the sound level. Five minutes of carelessness during an eight-hour working day could result in impaired hearing for the rest of your life. Full-time wear is therefore the only way to guarantee protection.

Safety

To be effective, a hearing protector should be used 100% of the time in noisy environments. Even taking it off for a short time dramatically reduces its effectiveness and greatly increases the risk of hearing damage.

The 3M™ PELTOR™ Headsets with level-dependent microphones for ambient listening and Bluetooth® technology encourage longer use because the wearer feels less isolated and can communicate with others more easily.

100%

ComTac Headset Solutions

Being able to communicate with your surroundings whilst at the same time being protected from harmful noise levels is a vital necessity in the military, both for exercises and battle situations. Noise levels are often so high that they can cause immediate, permanent damage to your hearing if proper hearing protection is not worn.

The 3M™ PELTOR™ ComTac Product range includes invaluable tools for people who are subjected to impulse noises. 3M™ PELTOR™ ComTac Products help protect against harmful noise while letting in and sometimes even amplifying quiet ambient sounds.

3M™ PELTOR™ ComTac XPI

Headset Features

Hearing Protection

Noise attenuating ear cups help provide hearing protection in environments with potentially hazardous noise

Great Connectivity

The external radio jack or connection cable provides the possibility to connect to an external communication device

Easy to use

The headset is controlled with two buttons along with a ghost voice to help guide you through the settings.

“Plug and play”, no start up time

Level dependent – Situational Awareness

Environmental Listening is a means of allowing safe audio sounds to bypass the individual hearing protection while still protecting against harmful noises. This is accomplished with a proprietary digital audio circuit integrated into the headset.

A microphone receives the sounds outside the headset and transmits them to a speaker inside the headset. The Level-Dependent digital audio circuit senses noise levels above the desired threshold and compresses them to a safe decibel level (82dB A) or amplifies weak sounds to an audible level.

Fail-safe mode

External communication and “Level dependent - Situation Awareness” are battery independent for Rx/Tx, fail safe mode.

In the event of battery depletion or other power failure, external communications will continue to function.

Slim design

Designed to be worn comfortably under a helmet and used with different kinds of weapons without interference

Situational Awareness

Level-dependent function for situational awareness and communication

Detachable Microphone
Easy to adjust and fit in to place

Gel Ring for more comfort in certain conditions.
Learn more on page 49

Water resistant microphone

The new noise canceling microphone is based on enhanced technology that makes it watertight and gives you built-in wind protection. The special design of the microphone also improves your speech intelligibility.

- Water resistant microphone IP68 (3m/30min)
- Improved communications in windy environment
- Functional after water contact
- Easy to clean
- Headset has backward compatibility with dynamic microphones
- Improved Noise performance

Microphone types

Standard microphone – An ambient noise cancelling dynamic microphone.

Flexi boom microphone – Has a flexible arm.

Throat microphone – Connects to the microphone jack. Works well with gasmasks and respirators.

Comtac XPI Headset

SLC80
27dB
attenuation

with maintained situational awareness

Comtac XPI Headset with earplug mode

SLC80
32dB
attenuation

with maintained situational awareness

Earplug mode

With small arms fire potentially achieving levels of 160 dB or greater, dismounted troops are particularly at risk as they no longer have the noise protection provided by armoured fighting vehicles. Soldiers in these situations desperately require situational awareness, and are often unable to wear the earmuffs and earplugs worn in training and by heavy artillery personnel.

The Comtac XPI headset provides a noise reduction of SLC80 27dB. This level of attenuation increases to SLC80 32 dB when worn with an 3M™ E-A-R™ Classic™ Earplug, but due to the Comtac XPI headset's innovative "plug mode", the environmental listening is unaffected, and the user maintains situational awareness.

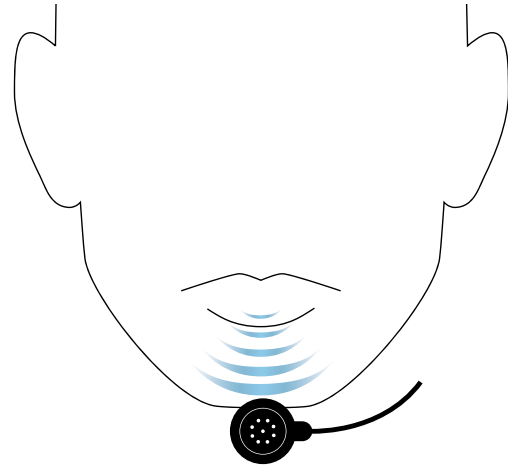

Dual protection is necessary in order to help protect from high risk noise such as mortars, artillery and anti tank weapons.

Bone Conduction Microphone

Bone conduction technology has been around for many years as a tool to help those with hearing loss.

A microphone with bone conduction picks up the sound of your voice through the vibration of the bones of your face (jaw bones and cheek bones). In other words the sound waves do not need to pass out through the mouth and into a microphone in front of it.

This allows communication without a need for any cables or anything obtrusive in front your mouth which can be useful when, for example, wearing a gasmask.

Standard microphone

- No cables needed
- Effective when wearing a gasmask
- Nothing obtrusive in front of the mouth

Bone Conduction microphone

Headband styles

Folding headband

Takes little space in backpack or pocket. Sealing rings are protected against soiling and damage.

Neckband

Compatible with many types of other protective equipment.

Helmet rail attachment

For use with most ballistic helmets with rails. **NOTE!** Not tested according to PPE directive 89/686/EEG.

High Attenuation Headset

Designed to be used in extreme military environments such as tanks (crew headsets), ground crew around fighter jets, and helicopters. The CH-5 Headset employs the latest technology to help provide protection against hazardous levels of noise including impact sounds.

The 3M™ PELTOR™ CH-5 High Attenuation Headsets offer a high SNR value and impact sound protection. Works great together with 3M™ PELTOR™ PTT Adapters or direct to an intercom system.

24 High Attenuation Headset

3M™ PELTOR™ CH-5 High Attenuation Headset

Headset Features

Highest SNR on the market*

With new innovative technology and design, the CH-5 headset helps protect against hazardous noise levels and very loud sounds.

Robust construction

Designed to cope with the rough and extreme environments in and around battle tanks during live firing conditions. Easy to maintain.

Adapters and Cables

3M™ PELTOR™ Adapters are equipped with an audio output via standard J11 connector, which means that our complete range of standard headsets can be used without any adaptation. The outgoing cord is equipped with connectors for communication radios or telephones. We can fit most of the common radios/phones on the market.

Adapters and Cables

Features

Radio Connections

Able to connect various radios and Intercom systems on the market.

Sturdy design

Can be used with a gloved hand. Designed to reduce accidental activation. Water-resistant.

360° turnable clip

Design to accommodate left and right handed operators. For secure fastening on garments.

3M™ PELTOR™ Adapter Single PTT FL4000

- Small, strong and easy-to-handle adapter, specially designed for rough environments
- Designed to help protect the electronic components against moisture
- Tested and approved for min. of 100,000 plug-ins
- 360° turnable clip for secure fastening on garments

Tactical Earplug Solutions

3M™ PELTOR™ level dependent technology helps provide hearing protection in noise and improves communication in quiet. Protecting hearing and improving situational awareness can help increase personal safety and can improve productivity. Ear pieces also include a small antenna to allow audio signals to be received wirelessly from a neckloop accessory.

3M™ PELTOR™ Tactical Earplug, TEP-200 EU

Earplug Features

Compatibility

3M™ PELTOR™ Tactical Earplug is compatible with most headworn 3M™ Personal Protective Equipment (PPE) such as helmets, hardhats, and face shields

Comfort

The small and lightweight design helps improve overall comfort and user experience

Hearing Protection

Replaceable communications eartip helps provide hearing protection in noisy environments. Multiple sizes and types designed to fit most ear canals.

Communication

3M™ PELTOR™ TEP-200 EU has a small antenna built-in to allow audio signals to be received wirelessly from a neckloop accessory.

3M™ PELTOR™ Tactical Earplug, TEP-200 EU

Electronic Level Dependent Hearing Protector

Design

Corner radius designed to help soften contact zone and increase comfort

Button

Intuitive one-button operation turns unit on, off, and selects volume settings

Charging case

Pocket-sized storage and charging container

Charger operates from battery or USB power

Communication

Ear pieces also include a small antenna to allow audio signals to be received wirelessly from a neckloop accessory.

Level- dependent Headset Range

The 3M™ PELTOR™ Level-dependent headset product range includes invaluable tools for people who are subjected to impulse noises.

Level-dependent situational awareness helps protect against harmful noise while letting in and even sometimes amplifying ambient sounds.

THESE HEADSETS ARE NOT INTENDED TO BE USED IN COMBAT SITUATIONS AND DO NOT FIT UNDER A BALLISTIC HELMET.

Earmuffs & Earplugs

3M™ PELTOR™ Earmuffs consist of rigid cups with soft plastic cushions that seal around the ears to block noise. They are available in headband, neckband, helmet-attachable and folding models to meet virtually every application need and wearer preference.

3M™ E-A-R™ Hearing Protection Products are manufactured to help anyone who spends time in noisy environments. Over 30 years ago the 3M™ E-A-R™ Classic™ Earplug was introduced. The yellow foam earplug, established new standards in hearing protection and comfort. Today this earplug continues to be the most widely recognised product in hearing protection all over the world.

3M™ PELTOR™ Earmuffs – X Series

- Combines our extensive knowledge of hearing protection with our advanced technologies, creating our most comfortable, durable earmuff.
- Durable 3M™ PELTOR™ Earmuff
- Features an electrically insulated (dielectric) wire headband
- Twin headband design helps reduce heat buildup with good fit and balance
- New ear cushion foam technology for an effective acoustic seal and reliable hearing protection
- Lightweight ear cups with maximum space to help minimize heat and moisture buildup

3M™ PELTOR™ Earmuff X4

3M™ PELTOR™ Earmuff X5

3M™ PELTOR™ Bullseye I Earmuff

- Sealing rings filled with a unique combination of liquid and foam. The result is an excellent seal with low contact pressure.

3M™ Combat Arms™ Earplugs – Generation 4.1

- Hear-Through™ Protection
- Specially designed soft retainer helps ensure the earplug remains seated inside the ear canal.
- Rocker switch for easy switching between Closed Mode and Open Mode.
- Available in three sizes for best individual fit
- Offers high attenuation against peak impulse noise – can be used up to 160dB peak
- Easy to wash and clean

This product features a special acoustical filter that lets lower level sound through with relatively little noise reduction for greater situational awareness, and provides increasing amount of peak noise reduction as sound levels increases above 110 dB. This is called the **Open Mode**.

When used in the **Closed Mode** the product acts as a conventional earplug offering protection against steady state and peak impulse noise.

3M™ E-A-Rsoft™ FX™ Earplugs

- Soft, pliable foam offers comfort for wearing over an extended time
- Slow recovery foam effectively seals the ear canal and helps provide reliable hearing protection

3M™ E-A-R™ Classic™ Earplugs

- Made from a soft energy absorbing polymer foam
- Excellent hearing protection and extended wear comfort
- Ideal for use where noise is a problem, either in work or leisure activities.

Respiratory Solutions

With over 75 years of experience in the life safety product industry, 3M-Scott Safety is the consultative partner of choice-providing holistic solutions to help you meet protection requirements, budgetary constraints and your ultimate goal of protecting and defending your front line.

Our broad portfolio of products, combined with our deep understanding of new and emerging technologies, puts us in a unique position to help analyze and predict your changing needs.

We can offer comprehensive solutions that will help extend your capabilities across all lines of development.

3M™ Scott Safety M95 Dual Lens Respirator

The lightweight, low profile M95 Dual Lens Face-piece is suitable for first responders and other tactical personnel in both CBRN and other air-purifying applications.

- The bi-ocular lens provides excellent downward, horizontal and peripheral vision
- Lens allows the face-piece to be folded flat for easy storage.
- Drinking port allows for fluid intake and rehydration
- Two-piece construction of halo butyl, elastomer for the face-piece and silicone nose cup design
- Resistant to a wide range of toxic materials and Chemical, Biological, Radiological and Nuclear (CBRN) agents.

3M™ Scott Safety M98 Respirator

When paired with other DIN 40mm cartridges, the M98 can be used for a range of law enforcement operations. This respirator offers APR and PAPR protections, from CBRN to riot control to HAZMAT response.

- Soft silicone nose-cup helps minimize lens fogging by directing airflow over the lens
- A sleek, low-profile design and a wide, full-face lens for increased field of vision
- EN136: Class 3 approved with DIN 40mm cartridges
- Speaking diaphragm for face-to-face communications
- Connection to C420 CBRN PAPR

3M™ Scott Safety First Responder Respirator (FRR)

The FRR is designed to help protect operators from respiratory hazards, and provide low breathing resistances while remaining comfortable for long duration wear.

- Ergonomic design and filter mounting on either side of the mask to accommodate weapons sighting
- Built in drinking port for hydration
- EN136:2006 Class 3 & BS8468-1:2006 & BS8468-2 approved with DIN 40mm cartridges

Optional:

- Voice Projection Unit (VPU)
- Out-certs for lens
- Vision correction capability for use of progressive (vari-focal) lenses

Protection for Maintenance & Repair Operations

3M is dedicated to providing the right personal protection solution to the thousands of dedicated defence personal. Whether you are a mechanic in the army, an electrician in the navy or ground crew in the air force, 3M has a solution to help keep you protected.

Training and Support

3M's team of Specialist Representatives are available nationally, to provide support and training that meet the needs of our customers. Furthermore, our qualified and highly experienced team are able to assist customers by:

- Providing guidance to employers on conducting initial and ongoing assessments of the workplace
- Recommending appropriate respiratory, hearing, eye protection, communication and spill management solutions required to help maintain a safe work environment
- Providing technical advice about the correct use and maintenance of the solution that has been selected
- Facilitate on-site fit testing for both respiratory and hearing protection solutions, as required

No matter how effective a piece of Personal Protective Equipment is, it will offer little or no protection if it is not fitted and/or worn correctly. Proper inspection, cleaning and storage is vital for safety equipment that protects a worker's health and well-being. That is why we offer training programs that explain the correct way to fit, inspect, clean and store the PPE designed and manufactured by 3M.

Technical Assistance

3M TechAssist is an excellent point of contact for your questions, especially when you require a prompt answer. Supported by trained staff, TechAssist is an immediate link to the worldwide resources of 3M.

3M™ E-A-Rfit™ Dual-Ear Validation System

The highest-SNR earplug or earmuff won't provide the expected protection if it doesn't fit right or isn't used right. To make sure your personnel are getting the protection they need, you need to know the Personal Attenuation Rating (PAR) of every employee.

Fit

Have the employee insert their hearing protection.

Test

Connect to microphones and begin speaker test sound.

Assess

Use PAR to customise hearing protector selection.

Fail

A 'fail' result means the hearing protection is either not inserted properly or is the wrong type or size for the worker's ear canal.

Pass

A 'pass' result means the hearing protection is inserted properly and provides sufficient protection for the worker's specific job.

NOTE:

Finding out each employee's PAR is the first step to a successful hearing conservation program. Once a worker's PAR is measured, you can determine if they're using the right hearing protection and ensure they're trained on using it properly.

The 3M range of solutions for worker safety includes

Respiratory Protection

Head, Eye and Face Protection

Noise Measurement

Fall Protection

Protective coveralls

Ballistic head protection
